DISRUPTION

Øjemodel

TRADITIONELLE PIPELINEBASERET FORRETNINGSTILGANG

- Porters five forces
- Resource based view
- Value chains
- (Sustainable) competitive advantage
- *Disruption*
- *Business Model Canvas*

DIGITALE ØKOSYSTEMER OG PLATFORME

- Power of the Platform
- Network effects
- Complex value matrix
- Winner-take-all-markets
- *Disruption*
- *Platform Business Model Canvas*

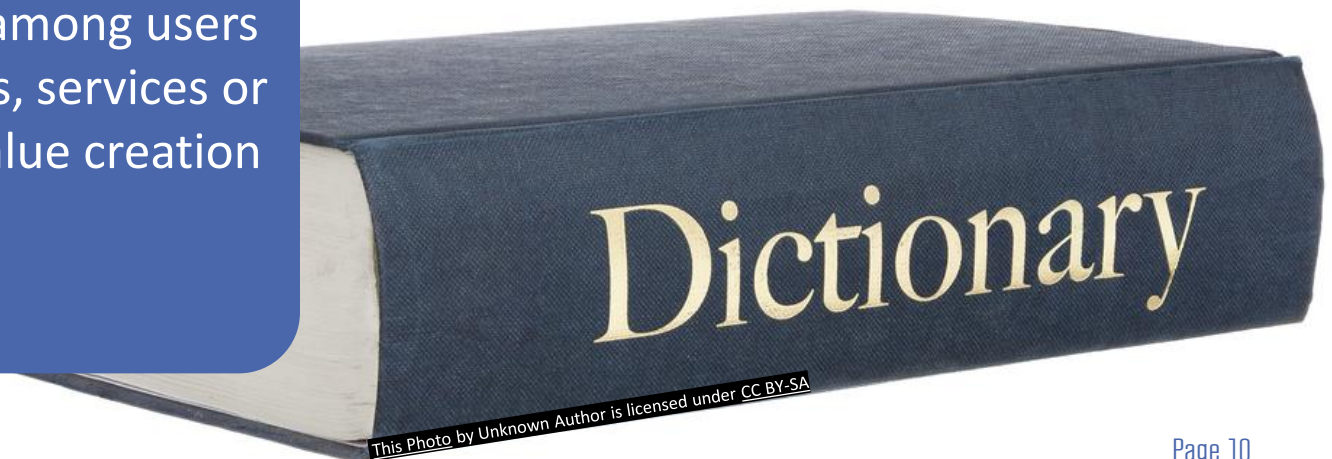

Disruption?

1. DEFINITIONEN OG REVOLUTIONEN

Platformen

Parker et al. (2017): 'Platform Revolution – How networked markets...'

- “A platform is a business based on enabling value-creating interactions between external producers and consumers. The platform provides an open participative infrastructure for these interactions and sets the governance conditions for them. The platform’s overarching purpose: to consummate matches among users and facilitate the exchange of goods, services or social currency, thereby enabling value creation for all participants”

Shape of Change

- Traditionelt

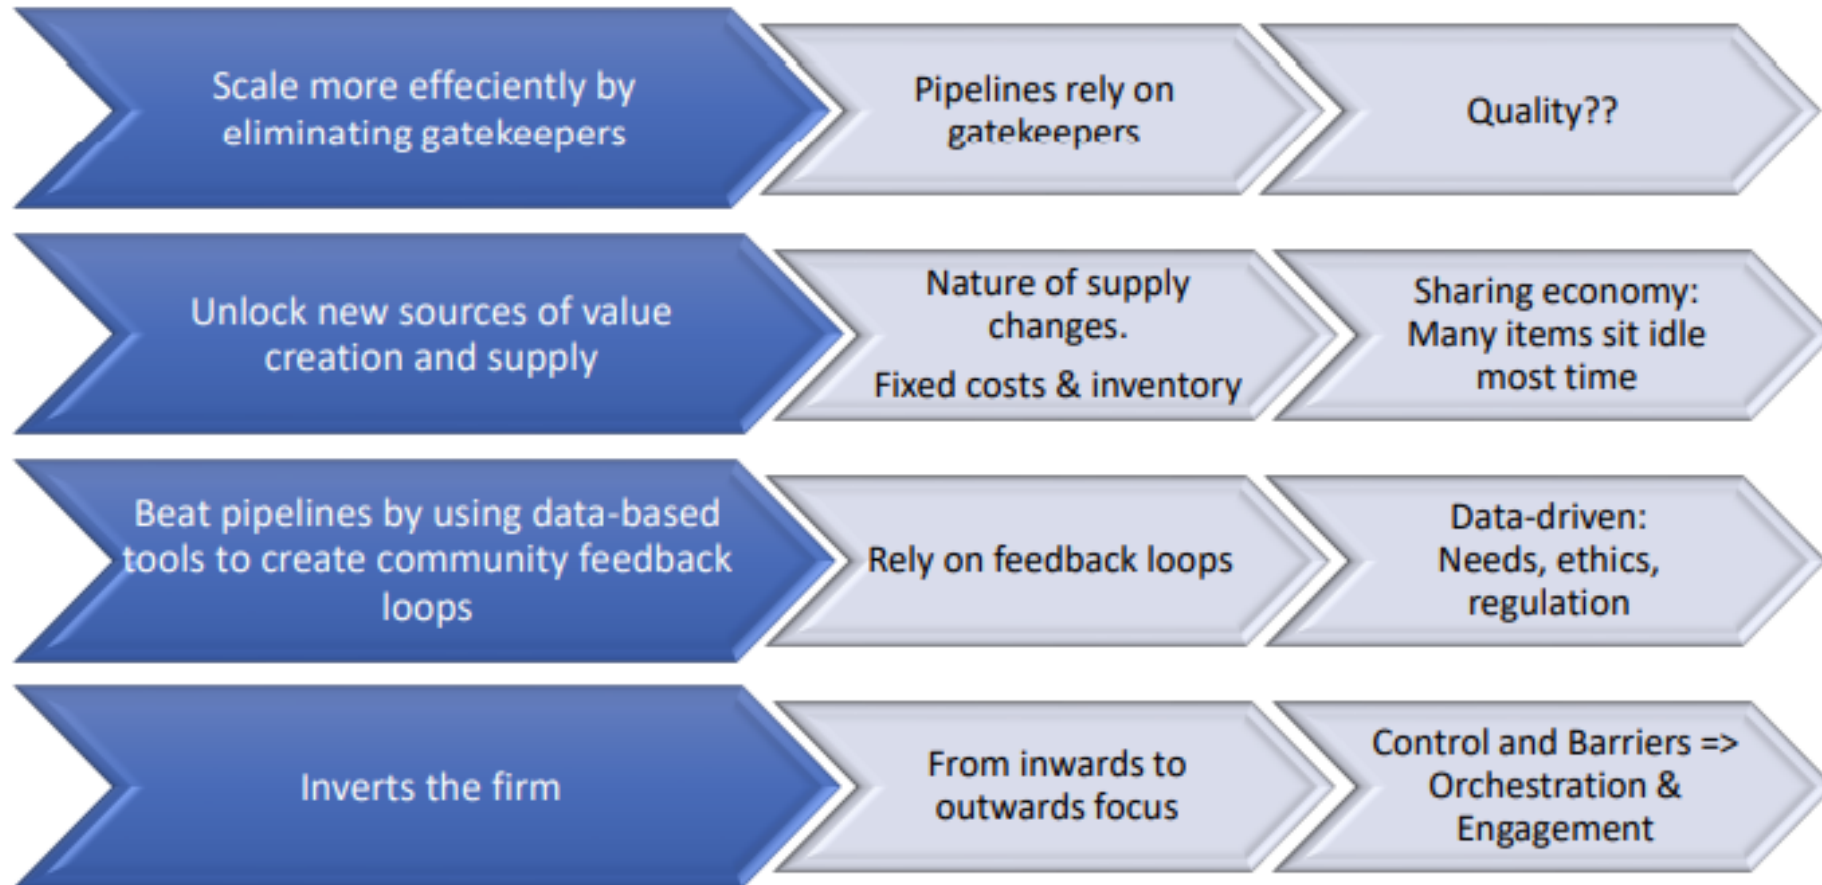

- Pipeline
- Linært
- Trinvis organiseret værdiskabelse
- Leverandører vs. forbrugere

- Platformen

- Komplex værdimatrice
- Ikke linært
- Værdiskabelse på flere måder i flere former
- Forbindelser
- Facilitering

Shape of Change

Eksempler

2. NETVÆRKSEFFEKTER

Network effects refers to the impact that the number of users of a platform has on the value created for each user

USD 150.000.000.000

The Napkin

SUPPLY VS. DEMAND ECONOMIES OF SCALE

- Supply economies of scale: These are driven by production efficiencies, which reduce the unit cost of creating a product or service as the quantities produced increase
- Demand economies of scale take advantage of technological improvements on the demand side—the other half of the profit equation from the production side. Demand economies of scale are driven by efficiencies in social networks, demand aggregation, app development, and other phenomena that make bigger networks more valuable to their users.
- Nonlinear or convex growth vs. convex collapse
- Network effects and for instance attractive pricing can drive massive market **adoption**

TWO-SIDED NETWORK EFFECTS

- To sider med gensidig tiltrækningskraft.
- Investeringer i at tiltrække den ene side
- Skiftende over tid
- Acceptable tab

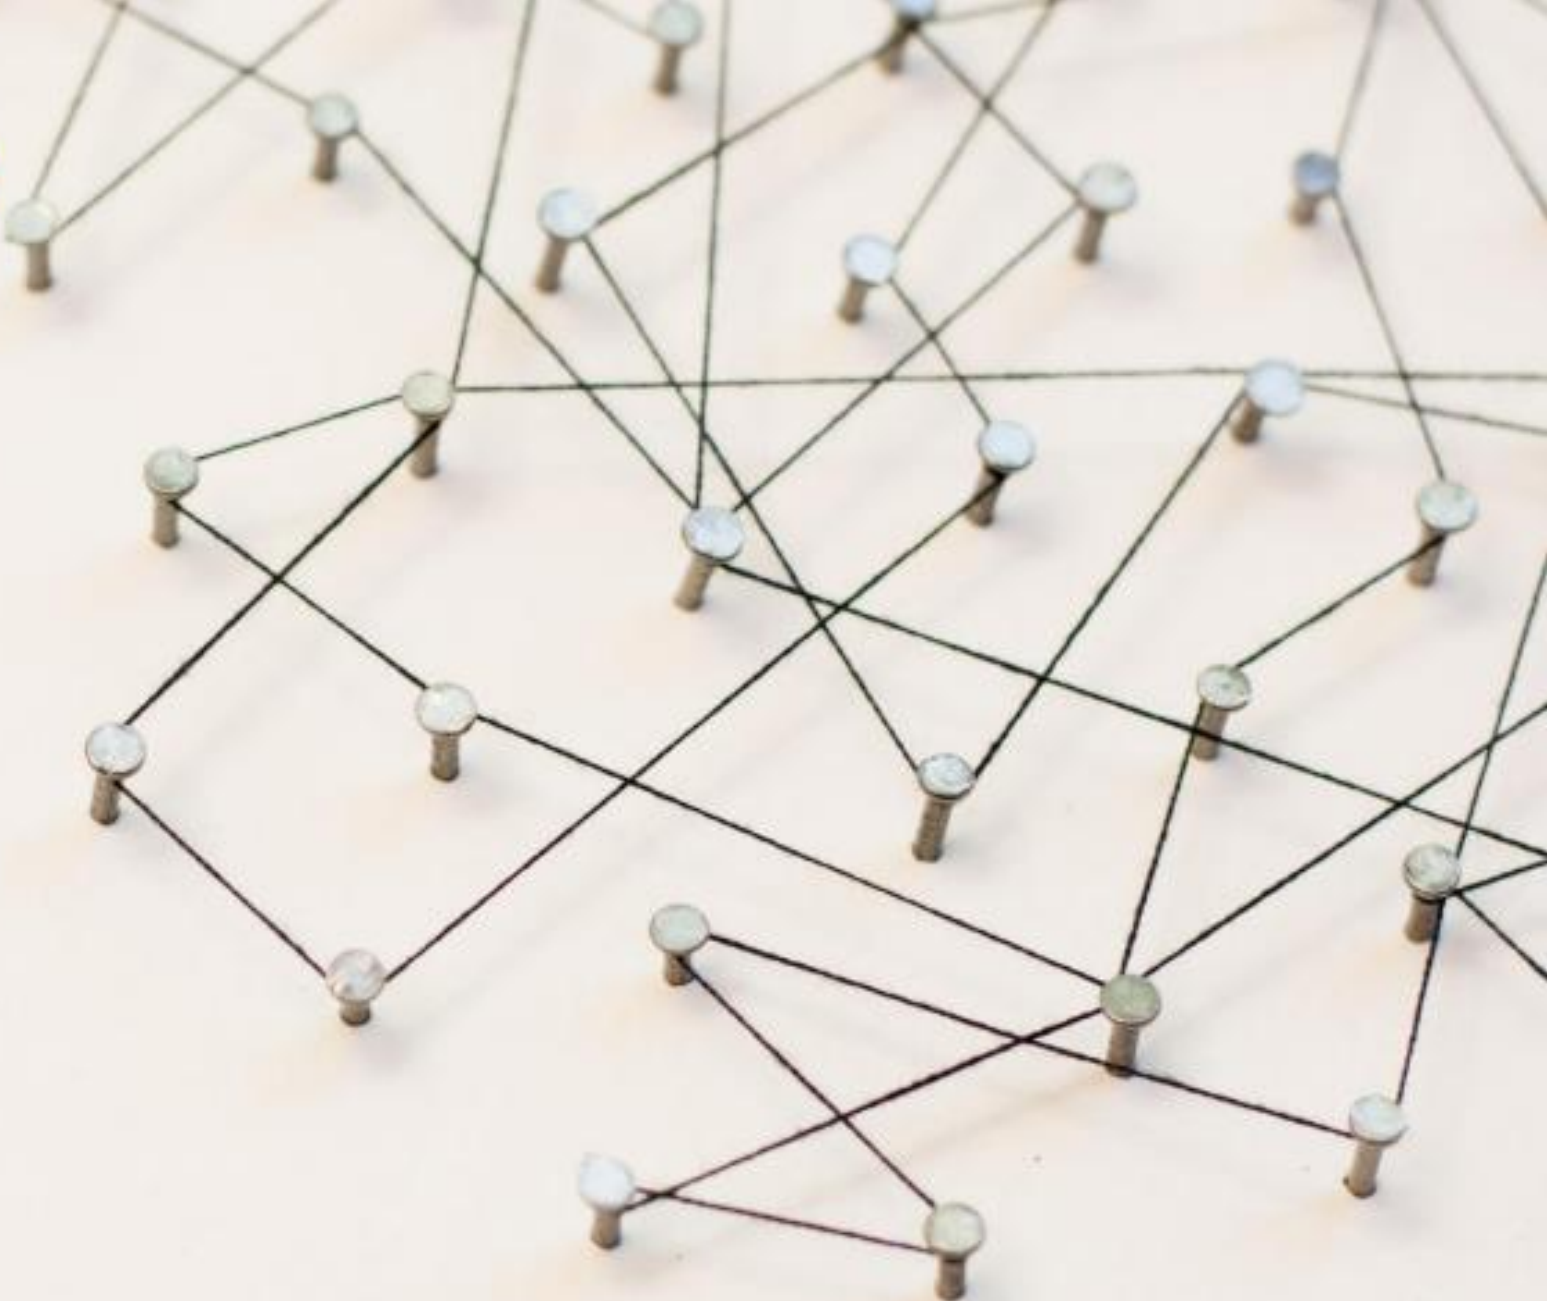

NETWROK EFFECTS VS. OTHER GROWTH BUILDING TOOLS

SCALING NETWORK EFFECTS

- Størrelse
- Skaleringsevne
- Friktionsløst
- Husk der er (mindst) to sider!
- Side switching

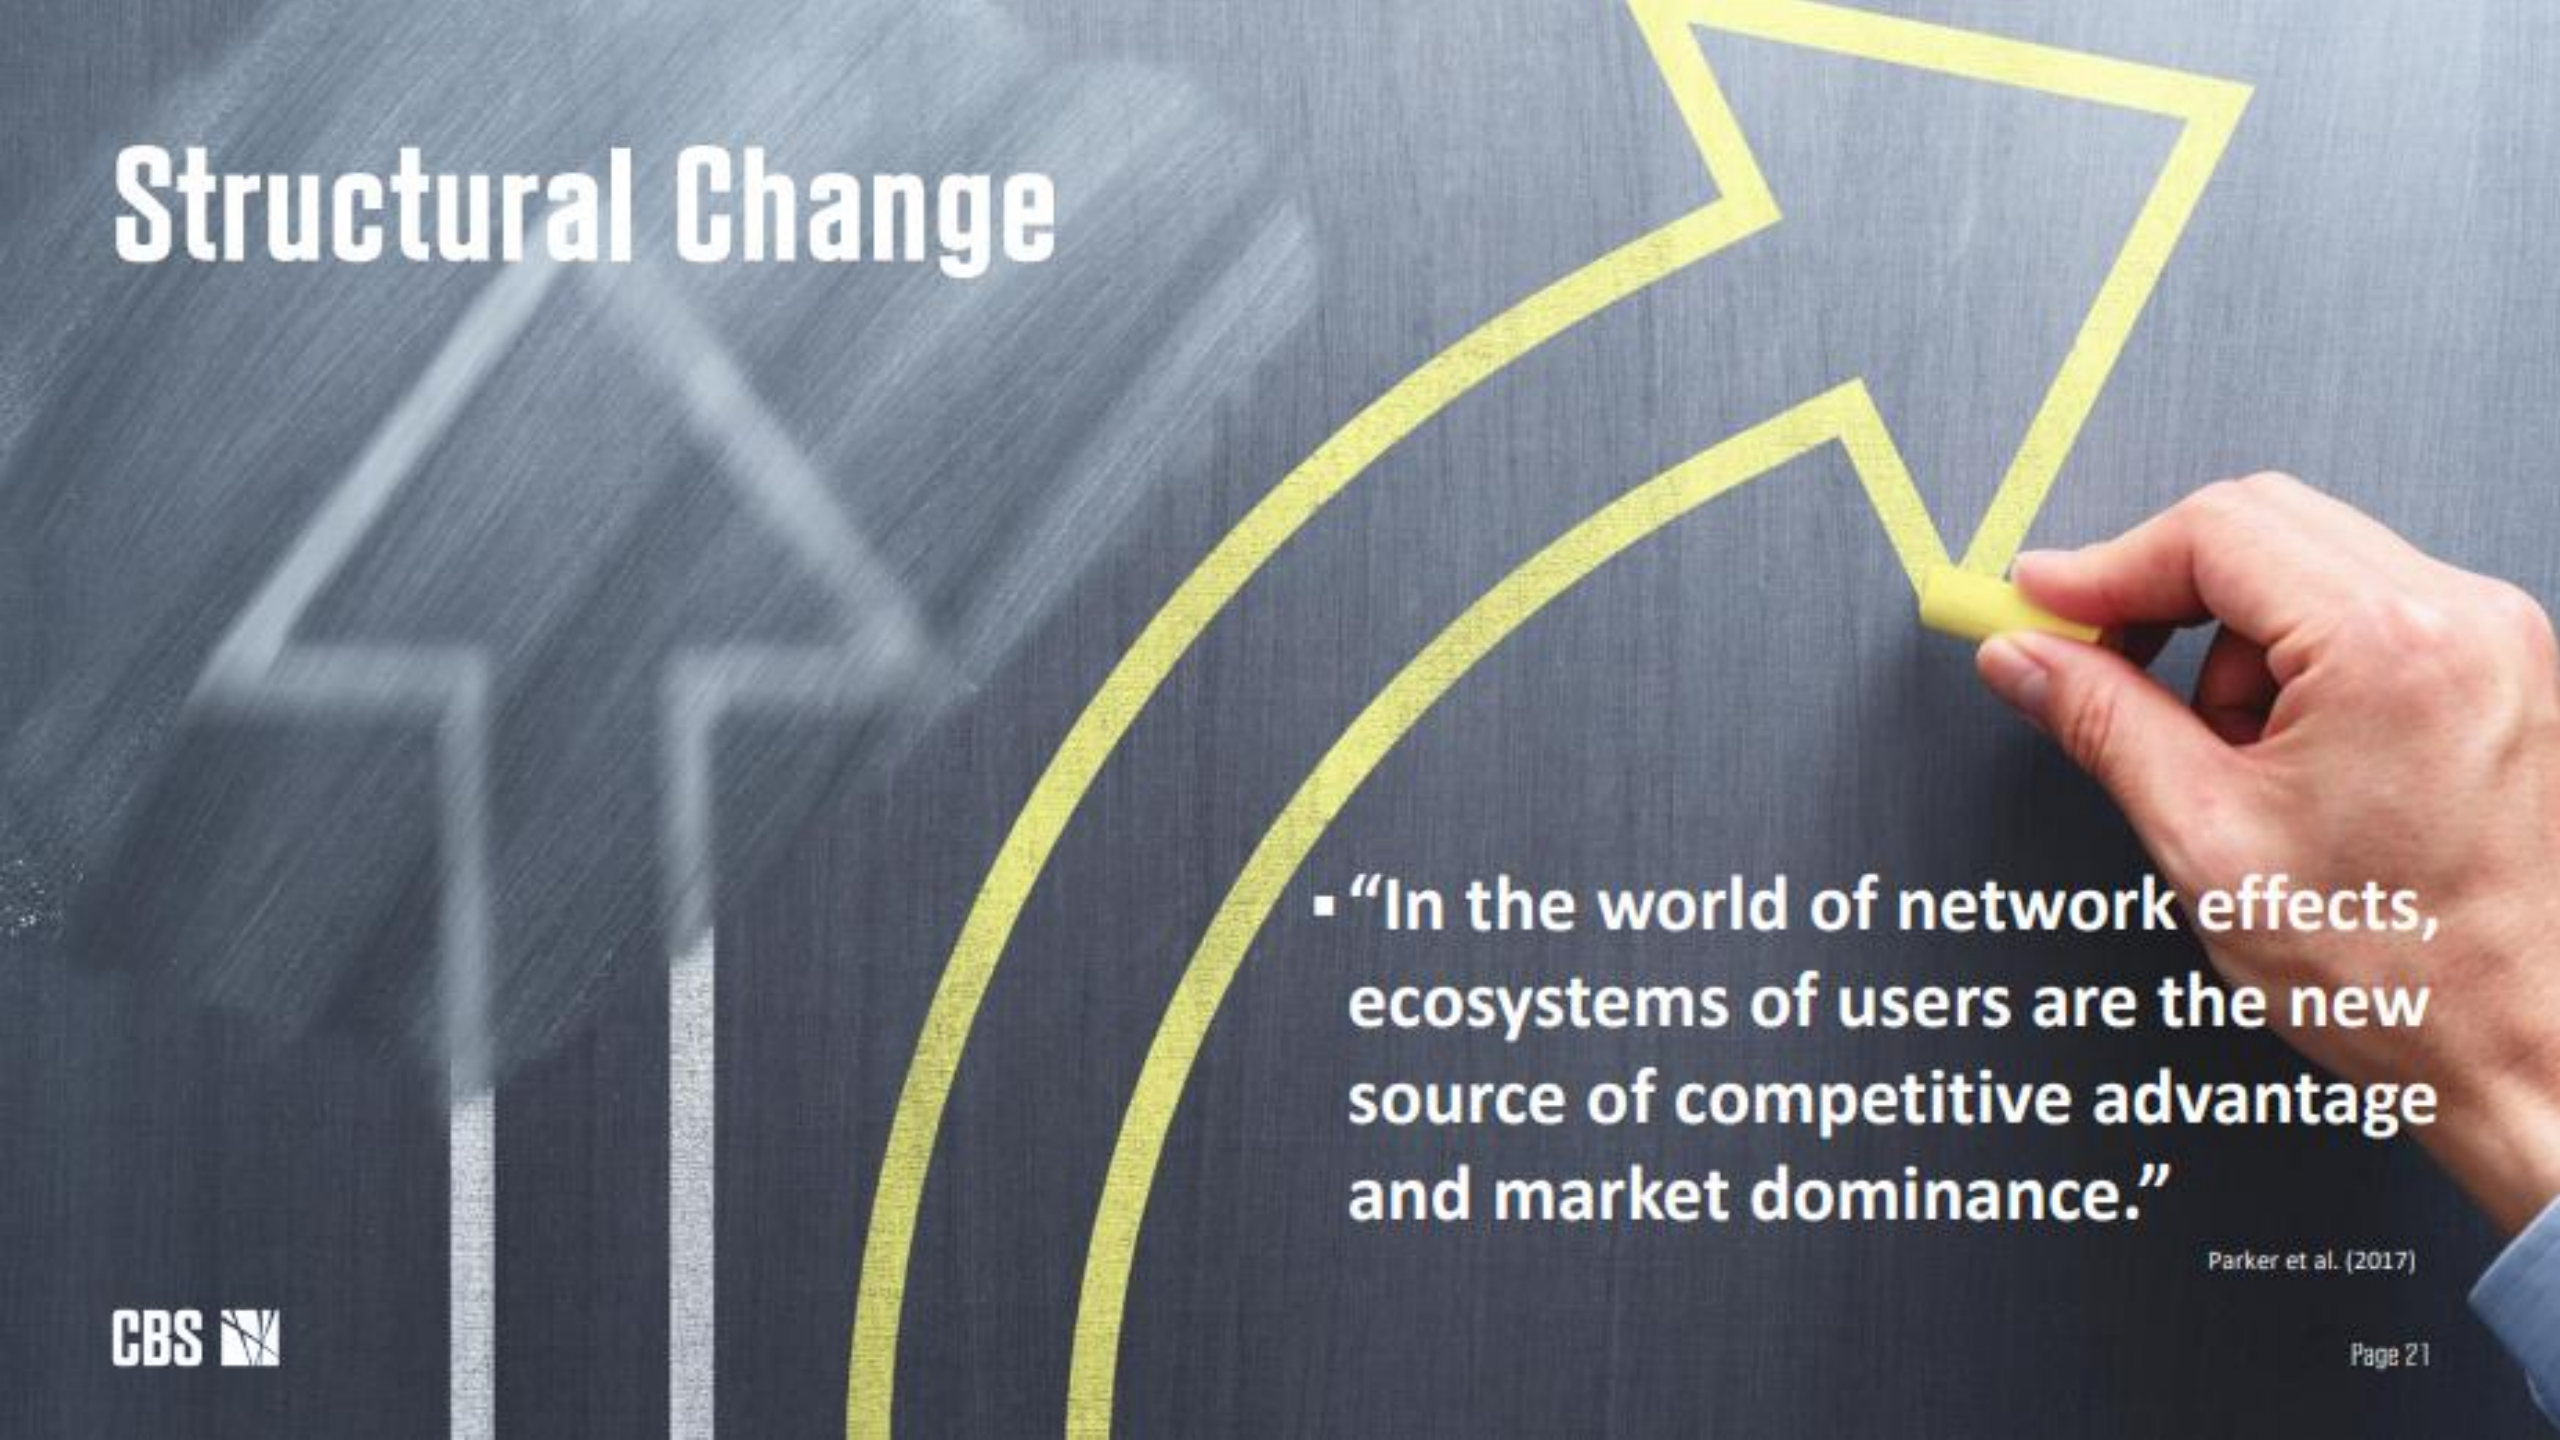

NEGATIVE NETWORK EFFECTS

- Vækst => uoverskuelighed
- Kuratering
- Data-drevne netværk
- Adgangsbarrierer

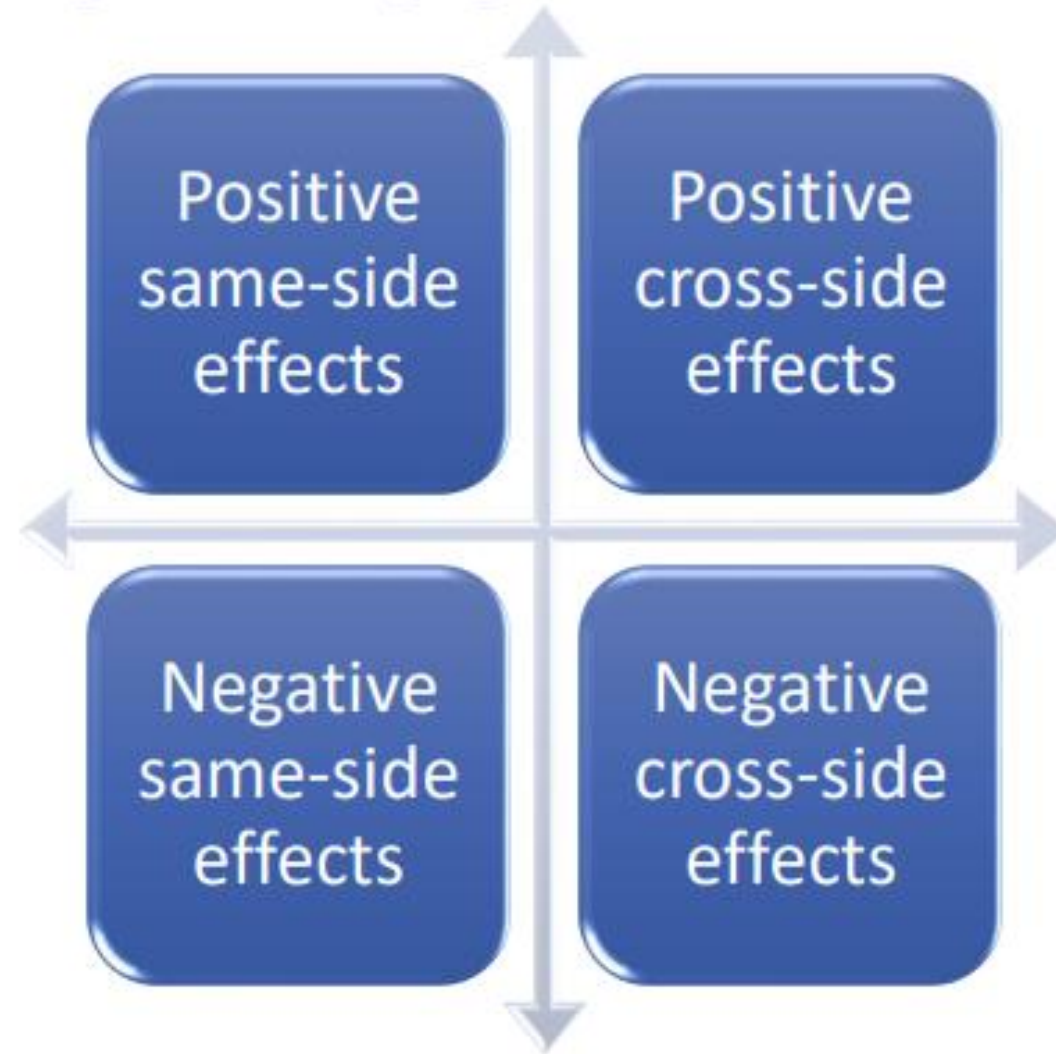

Structural Change

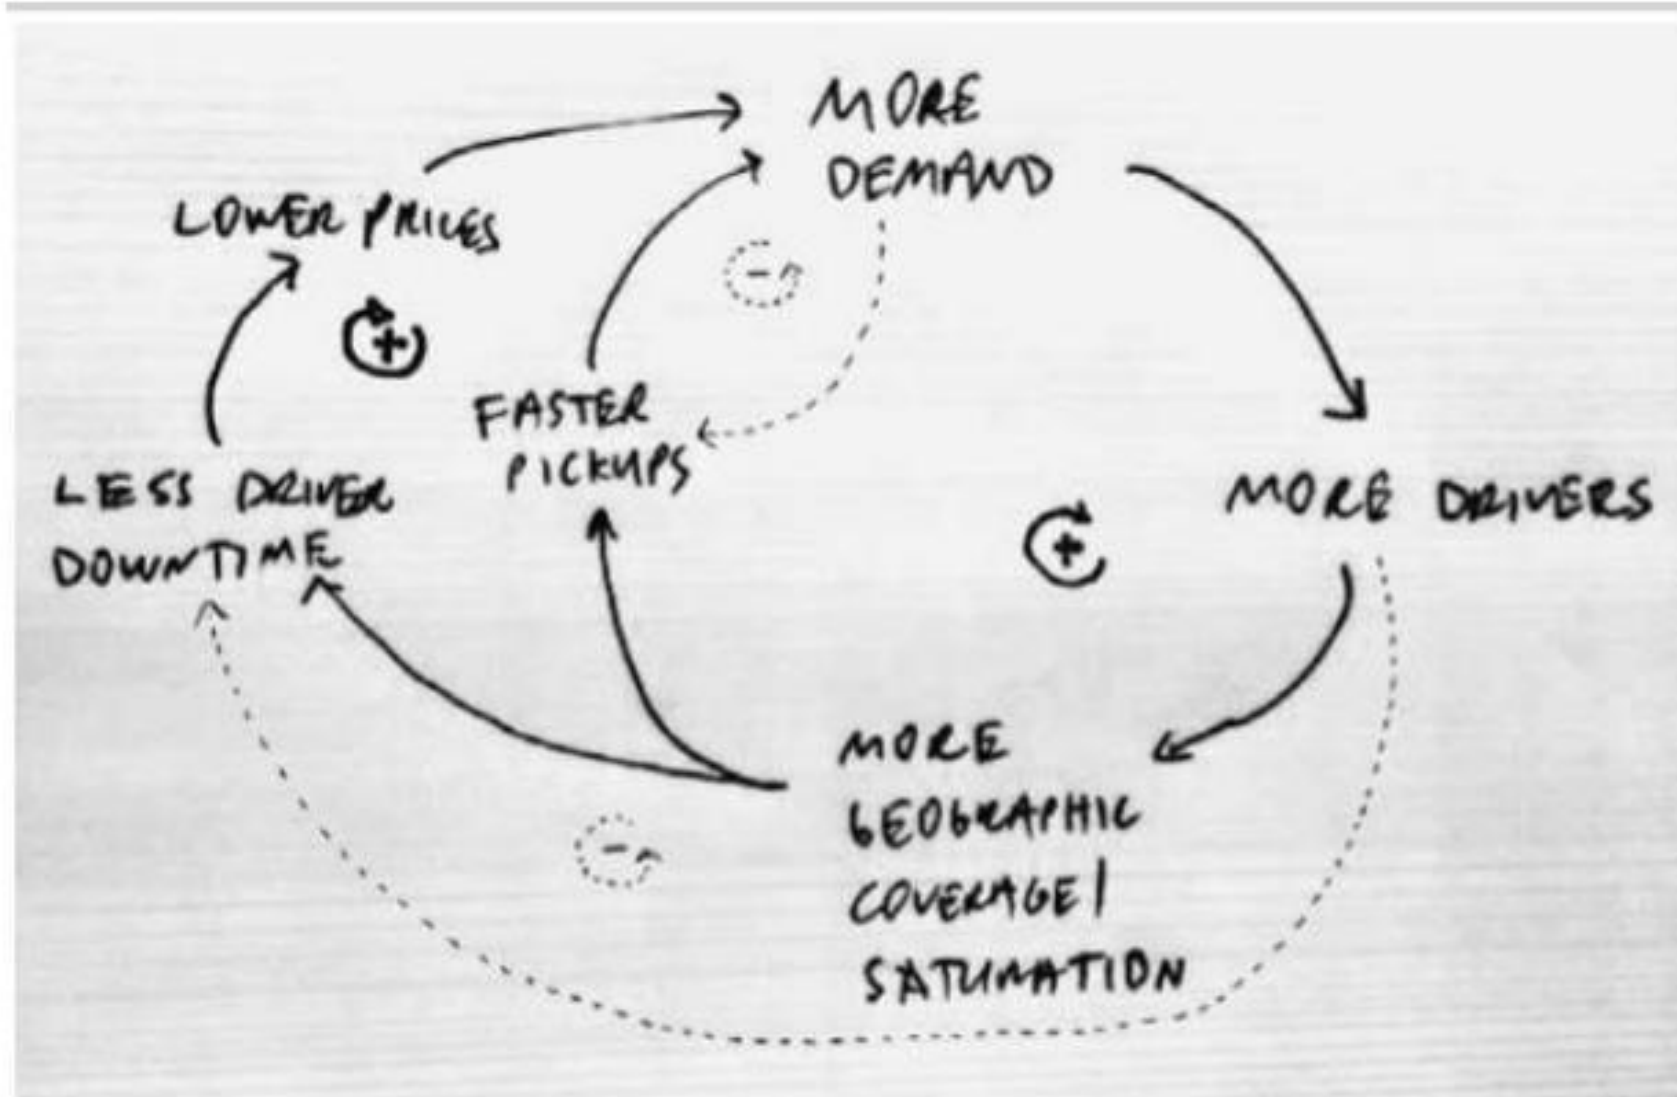

- “In the world of network effects, ecosystems of users are the new source of competitive advantage and market dominance.”

Parker et al. (2017)

THE AXES OF NETWORK EFFECTS

RESOURCE BASED VIEW

Johnson et al. (2017): Exploring strategy

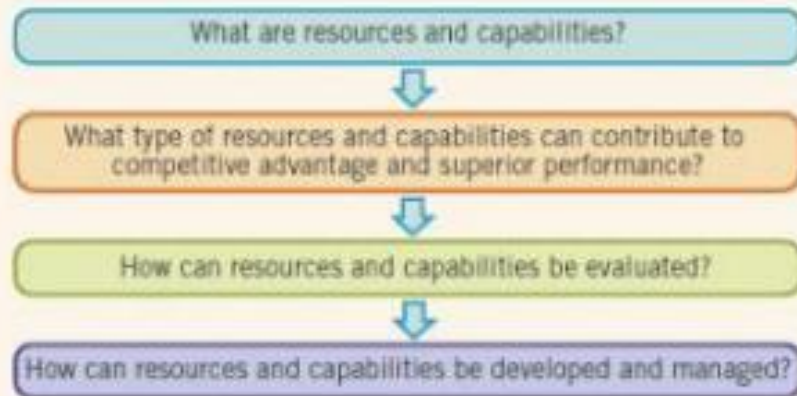

Figure 4.1 Resources and capabilities: the key issues

Table 4.1 Resources and capabilities

Resources: what we have (nouns), e.g.		Capabilities: what we do well (verbs), e.g.
Machines, buildings, raw materials, patents, databases, computer systems	Physical	Ways of achieving utilisation of plant, efficiency, productivity, flexibility, marketing
Balance sheet, cash flow, suppliers of funds	Financial	Ability to raise funds and manage cash flows, debtors, creditors, etc.
Managers, employees, partners, suppliers, customers	Human	How people gain and use experience, skills, knowledge, build relationships, motivate others and innovate

V	Value: Do resources and capabilities exist that are valued by customers and enable the organisation to respond to environmental opportunities or threats?
R	Rarity: Do resources and capabilities exist that no (or few) competitors possess?
I	Inimitability: Are resources and capabilities difficult and costly for competitors to obtain and imitate?
O	Organisational support: Is the organisation appropriately organised to exploit the resources and capabilities?

Figure 4.2 VRIO

Assumes ownership or at least control of the inimitable resource – for platforms it is often access over assets

THREE DIMENSIONAL CHESS

Parker et al. (2017): Platform Revolution...

[F]irms (...) can now intentionally manipulate network effects to *remake* markets, not just *respond* to them.

Three Levels of Competition

Rather than re-dividing a pie of more-or-less static size, platform businesses often grow the pie (...)

(...) it can pursue only the best opportunities while helping eco-system partners seize the others
(...) sharing the value (...)

(...) or create an alternative pie that taps new markets and sources of supply (...)

(...) platforms turn businesses inside out, moving managerial influence from inside to outside the firm's boundaries.

THE THREE LEVELS

Platform competes with another

- Strategic advance is based not on the attractiveness of particular products or services but rather on the power of the entire ecosystem

Platform competes with its partners

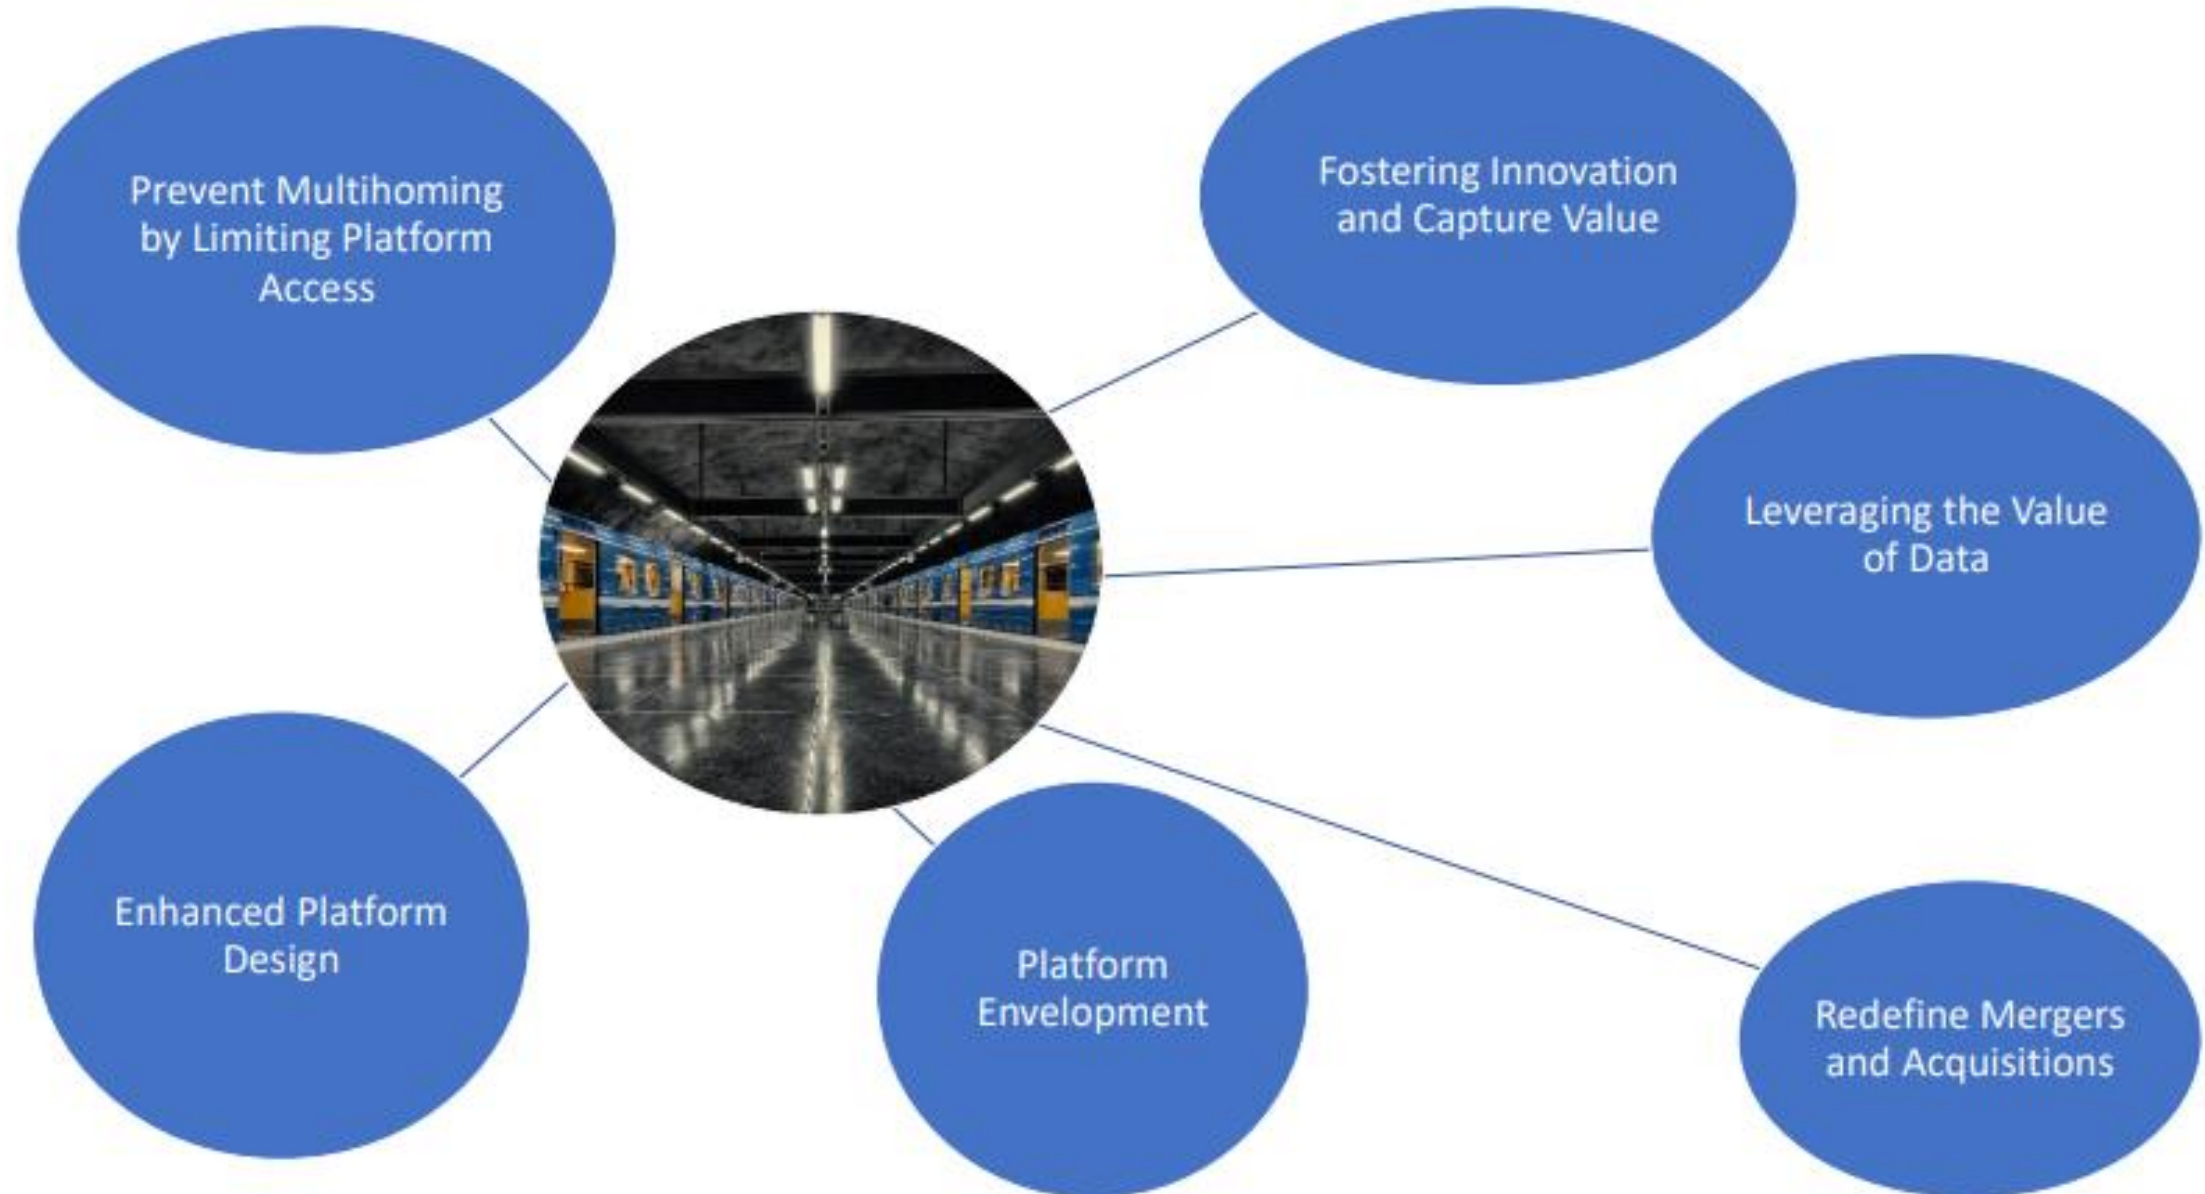

- It can strengthen the platform, but at the expense of weakening partners – a short-term gain that can lead to painful long-term consequences.

Unrelated partner competition

- Two unrelated partners **within** the platform ecosystem compete for positions.

COMPETITION STRATEGY

THE WINNER TAKES IT ALL MARKETS

- Supply economies of scale
- Strong network effects
- High multihoming or switching costs
- Lack of niche specialization

MARKEDSTYPER

Most likely to join

- Information-intensive industries
- Industries with non-scalable gatekeepers
- Highly fragmented industries
- Industries characterized by extreme information asymmetries

Susceptible but yet likely to be resistant

- Industries with high regulatory control
- Industries with high failure costs
- Resource-intensive industries

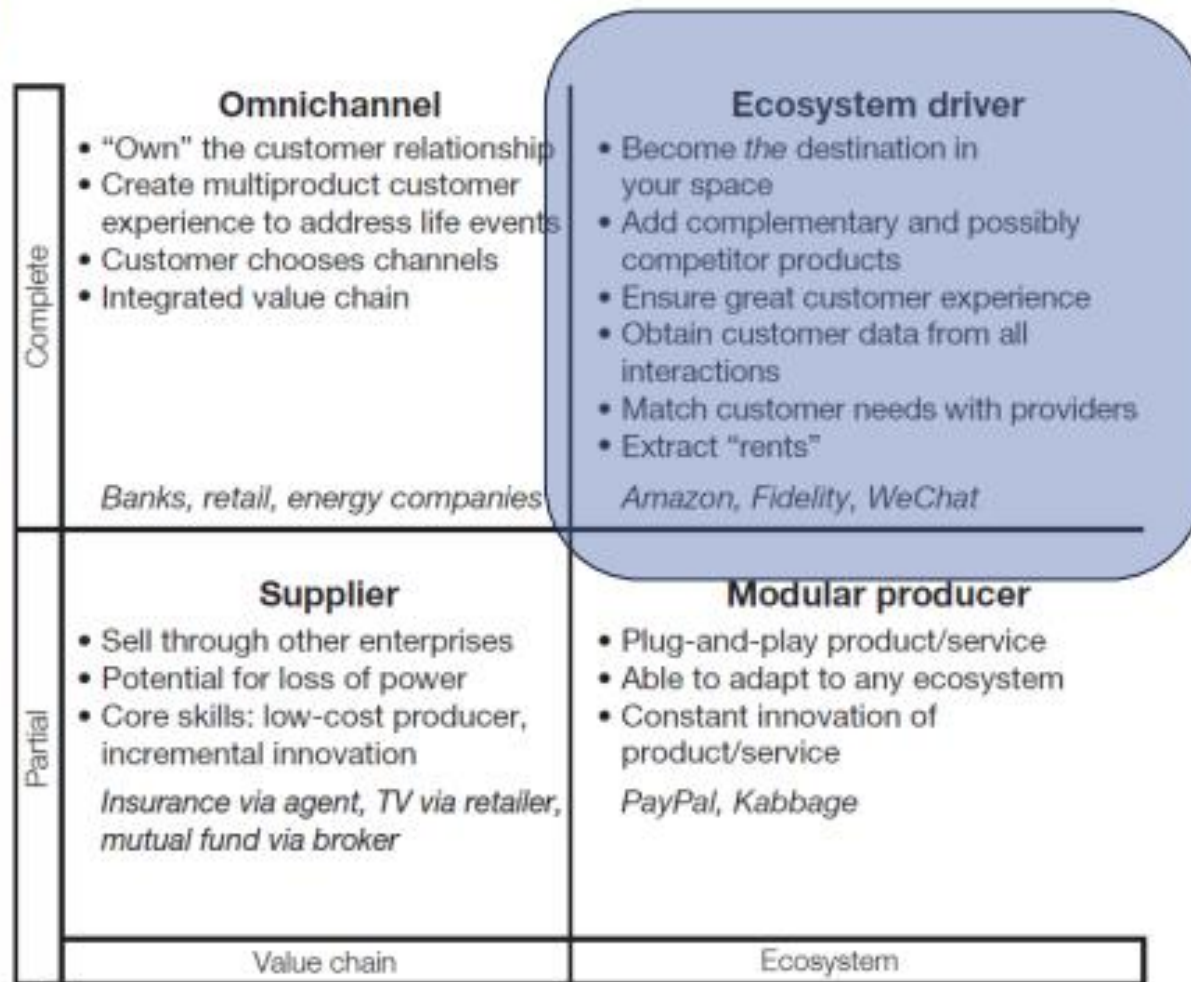

FIRE DIGITALE FORRETNINGSMODELLER

Weil & Woerner (2018: 8): Digital Business Model

“...[D]igitization is compelling companies to move their business models on two dimensions”:

1. “...from controlled value chains to more-complex, networked systems.
2. “...from less familiarity with customer needs and life events to a better, closer understanding of them, resulting in better customer engagement.”

Knowledge of your end customer
Know the identity, purchase history with
your company and other firms,
and customer goals

Business design

Who controls key decisions like brand, contracts, price, quality, participants, IP and data ownership, regulation

Partnering Readiness

Sebastian et al. (2020)

Distinctiveness: Identify partners to help build your distinctiveness in an ecosystem. Companies build distinctiveness in a number of ways, like developing a strong brand, market-leading offerings, and customer experience. Digital partners help you become a go-to destination.

Value proposition: Create new, unique value for your customers with your digital partners, including ease of use (such as in payments or logistics), better pricing, product choice, advice and tools to make better decisions, and complete solutions and experiences.

Organizational readiness: Reevaluate processes that were optimized for traditional partnerships (such as procurement and legal processes). Equally important, drive your company's digital transformation. In our research, high-performing companies have deeper knowledge of their customers, fewer silos, more pervasive adoption of agile methodologies, and stronger data analytics.

Openness: Share your company's core capabilities via APIs to scale digital partnerships to achieve growth. In our survey, 30 percent of companies had an open approach (sharing a substantial number of core capabilities externally), and 34 percent were opening up.

Complete guide to GDPR compliance

GDPR.eu is a resource for organizations and individuals researching the General Data Protection Regulation. Here you'll find a library of straightforward and up-to-date information to help organizations achieve GDPR compliance.

GDPR Overview

If you're new to the GDPR, the information in this section will help you get started.

GDPR Compliance

The articles in this section provide simple and straightforward guidance on how to achieve compliance.

News & Updates

How the GDPR is implemented in different countries.

Boks 4: Sag om Googles overtrædelse af konkurrence-reglerne – Google Shopping

I Google Shopping-sagen fra 2017, fandt Europa-Kommissionen, at Google havde misbrugt sin dominerende stilling på markedet for online-søgning til skade for konkurrenter på markedet for e-handelssammenligningssider. Google havde i sine søgeresultater givet en mere fremtrædende plads til sin egen shoppingtjeneste end til andre tjenester.

Council of the EU | Press release | 12 June 2023 | 12:53

Rights for platform workers: Council agrees its position

The Council is ready to start negotiations with the European Parliament on a new law that will help **millions of gig workers gain access to employment rights**.

Today, ministers for employment and social affairs agreed on the Council's general approach for a proposed directive to **improve working conditions for platform workers**.

The proposal introduces two key improvements: it helps determine the **correct employment status** of people working for digital platforms and establishes the first EU rules on the use of **artificial intelligence in the workplace**.

The gig economy has brought many benefits to our lives, but this must not come at the expense of workers' rights. The Council's approach strikes a good balance between protecting workers and providing legal certainty for the platforms that employ them.

— Paulina Brandberg, Swedish Minister for Gender Equality and Working Life

Infographic - Spotlight platform workers in the

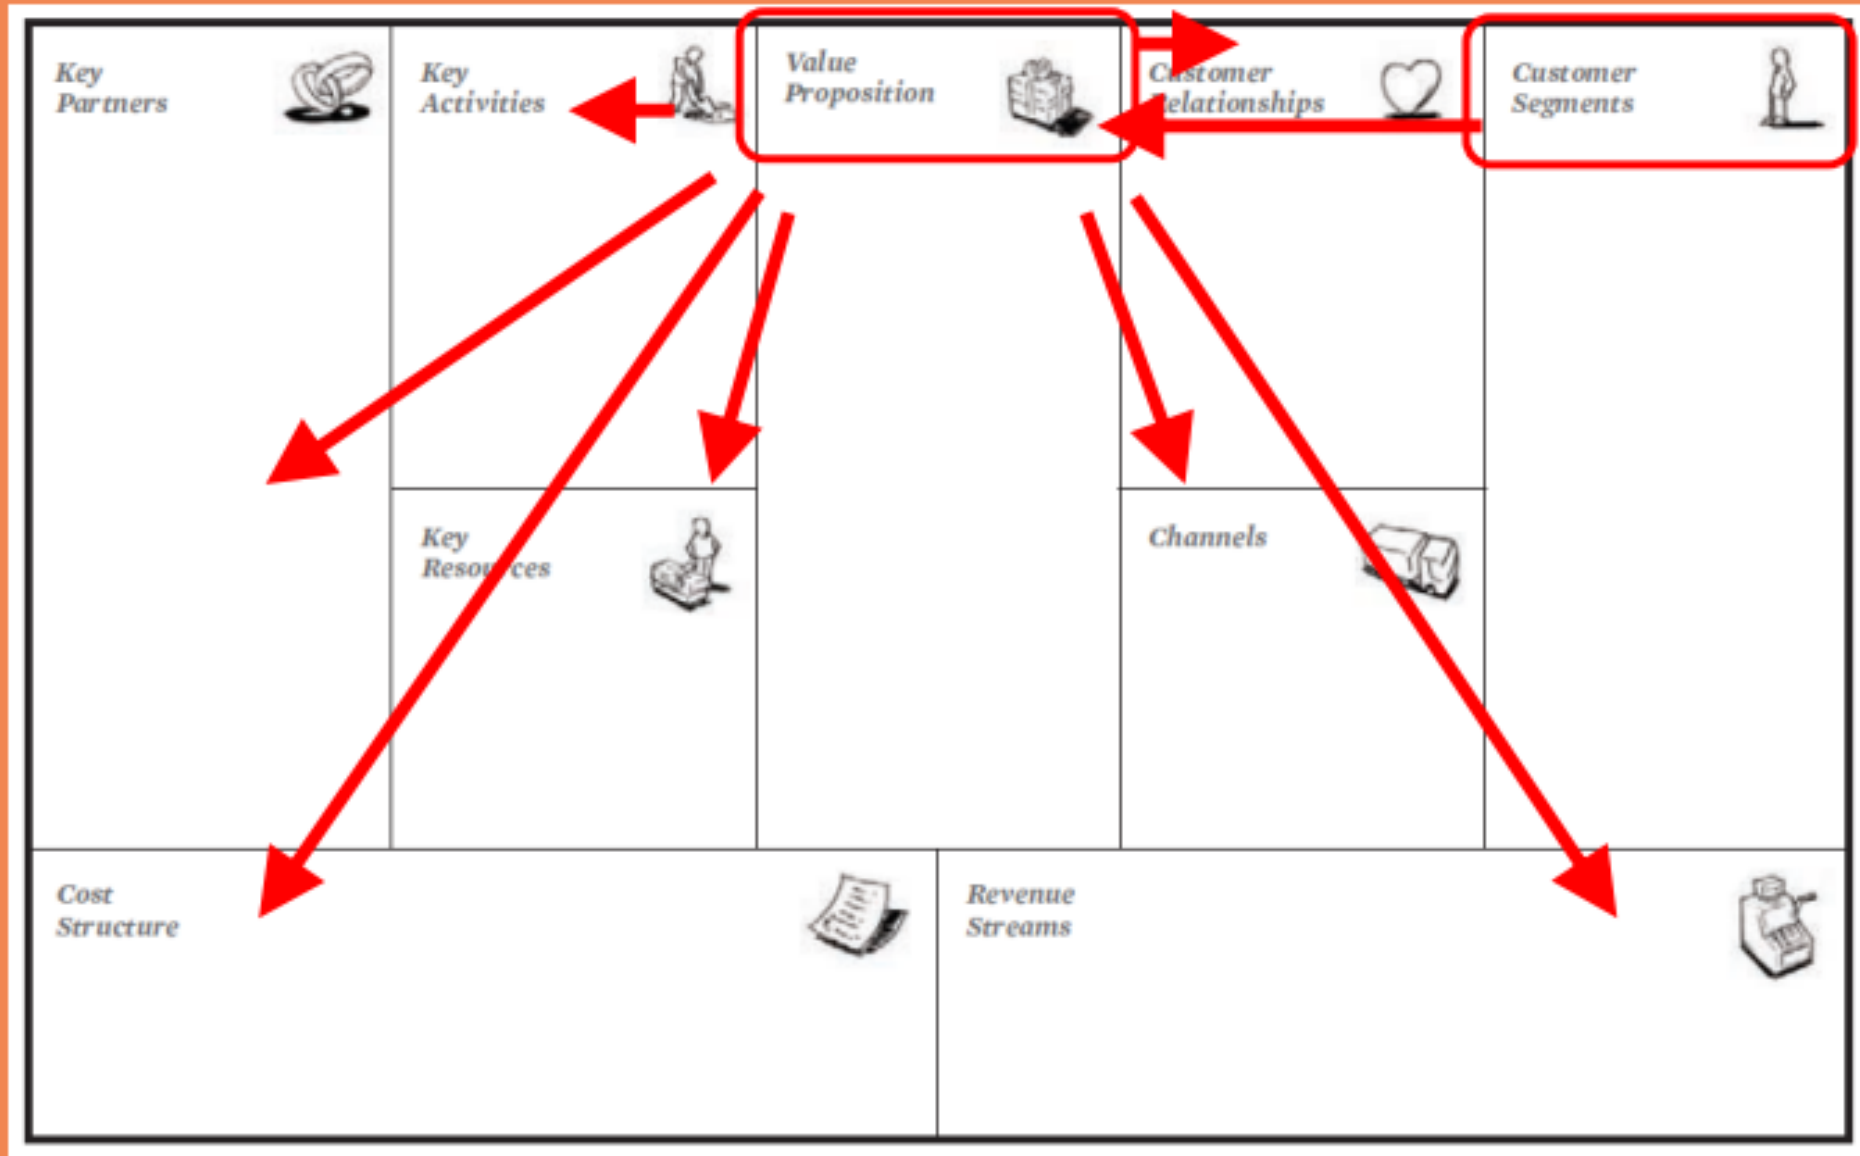

See full infographic

Correct classification of self-employed workers

Currently, the majority of the EU's 28 million platform workers, including taxi drivers, domestic workers and food delivery drivers, are **self-employed**. Nevertheless, a number of them have to abide by many of the same **rules and restrictions** as an employed employee. The Council's approach indicates that they are in fact in an **employment relationship** and should therefore enjoy the **labour rights** and **social protection** of employees under national and EU law.

Key Activities

- Product Development & Management
- Building Host network and Managing hosts
- Building travelers network and managing guests

Key Resources

- Local Hosts
- Skilled Employees
- Technology

Value Propositions

- Hosts
- Hosts can earn money by renting their space.
 - Airbnb offers insurance to house owners.
 - Free photo shoots for property listings through photographers.
- Guests
- Guests can book a homestay instead of hotel.
 - Prices are often less as compared to hotels.

Customer Relationships

- Customer Service
- Social Media
- Promotional Offers
- Home Insurance

Channels

- Website
- Mobile App for Android
- Mobile App for iOS

Customer Segments

- Hosts
- People who own a house and want to earn extra money.
 - People who want to meet new people.
- Guests
- People who love to travel.
 - People who want to stay comfortably at a cheap price.

Cost Structure

- Technological Set up & running costs
- Salaries to permanent employees
- Payments to freelance photographers

Revenue Streams

- Commission from Hosts upon every booking
- Commission from Guests upon every booking

PLATFORM BUSINESS MODEL CANVAS

Platform Business Model Canvas

1 Platform Users / Stakeholders

Consumer, Buyer, Implementer

These are the users that come to the platform to consume, buy or use something.

Provider, Seller, Supplier, Contributor

These are the users that come to the platform to provide, sell or contribute something.

Owner

The owner is the one that runs the platform.

Partner

These are the users of the platform that help ease a pain, facilitate interactions / transactions or offer core services to the other users on the platform.

2 Value Proposition

Job

The job is what platform users, partners or owners want to get done on the platform. It is the need that is satisfied, the problem that is solved.

Pain

While getting the job done, these are issues, problems, negative factors that platform users, partners, the owners must deal with.

Gain

While getting the job done, these are positive effects that users, partners and owners get from using the platform.

Core Value Unit

The Core Value Unit is what the buyers and sellers look for in a market. It is a specific unit. It has no value in itself.

Transaction

Transactions are the result of successfully matching partner, user and owner needs. Transactions generate revenue and benefits.

3 Access and Usage

Resources

Resources are the assets required to be able to access, use or run the platform.

Activities

Activities are the tasks that have to be accomplished in order to access, use or run the platform.

Access Channel

Access channel states how a platform can be accessed by users and partners in order to offer or consume content, products or services.

Filter

Filters are set to make sure destructive ("bad") users or partners have restricted access and productive ("good") users or partners have low barrier access to the platform.

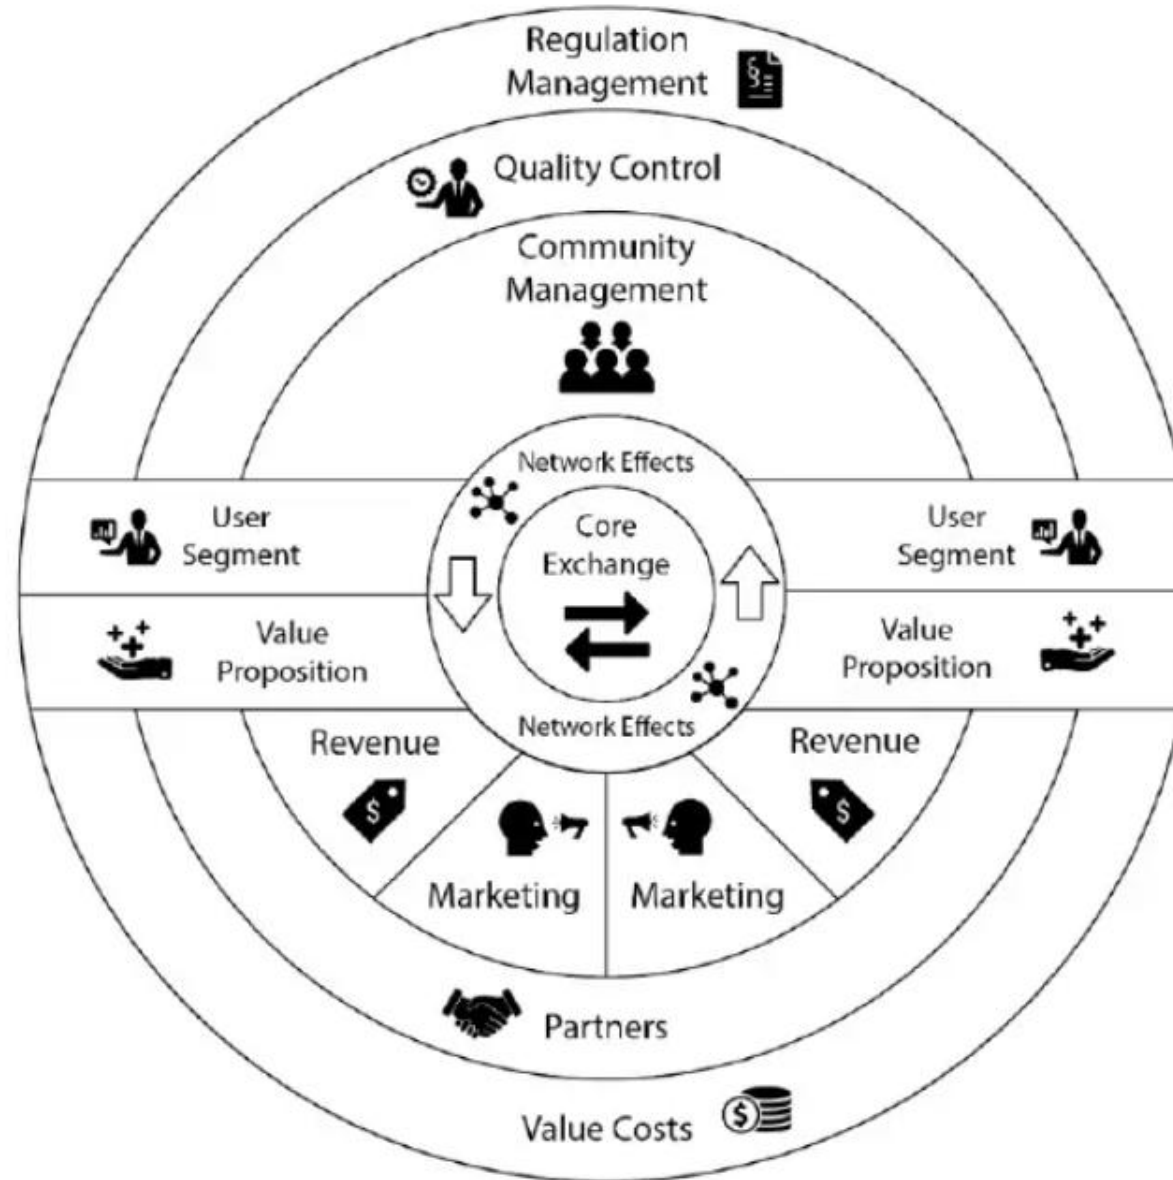

Promotion Channel

Promotion channel states how the platform is promoted and on what channels the story of the platform is told. This is vital in order to quickly grow the community of the platform.

Governance

Keeping the community healthy is key. Therefore, rules, regulations and self healing community mechanisms are set to ensure a positive, productive and safe environment

Exhibit 1: Platform Business Model Canvas

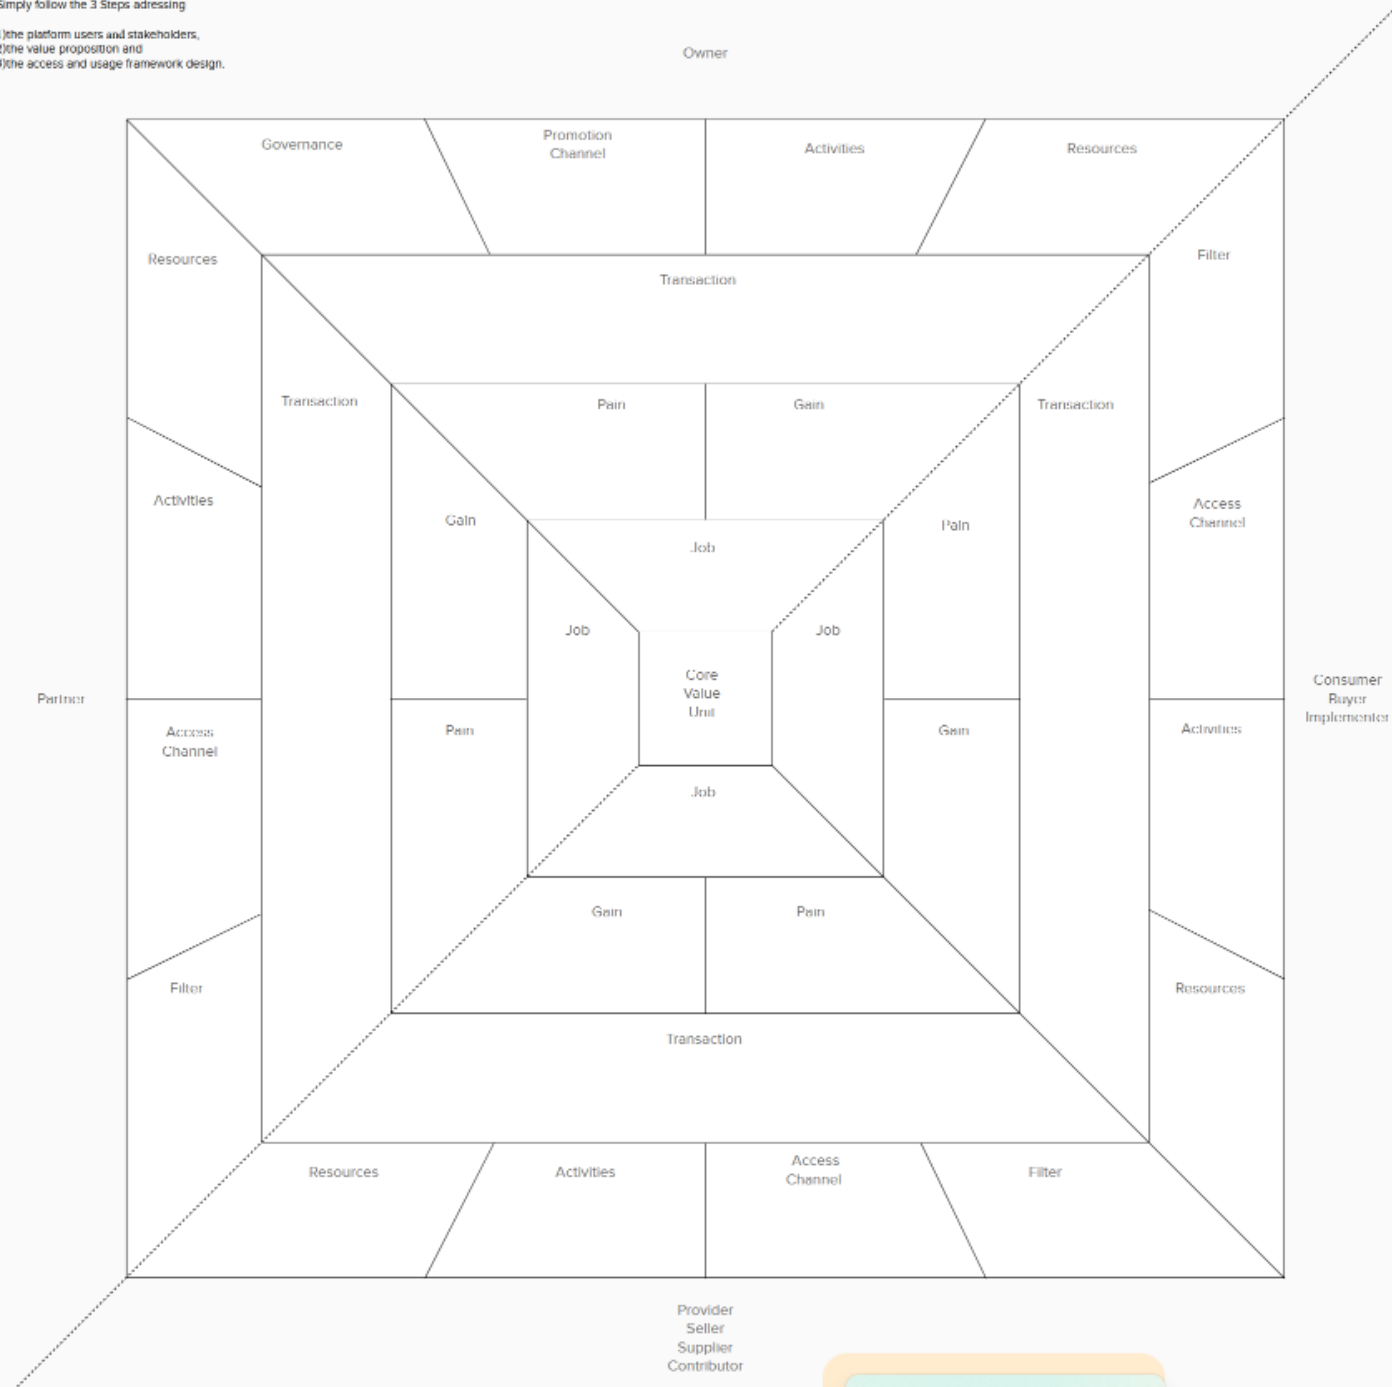

Platform Business Model Canvas

Use this when you want to design, visualize, describe or analyse a platform business model.

Simply follow the 3 Steps addressing

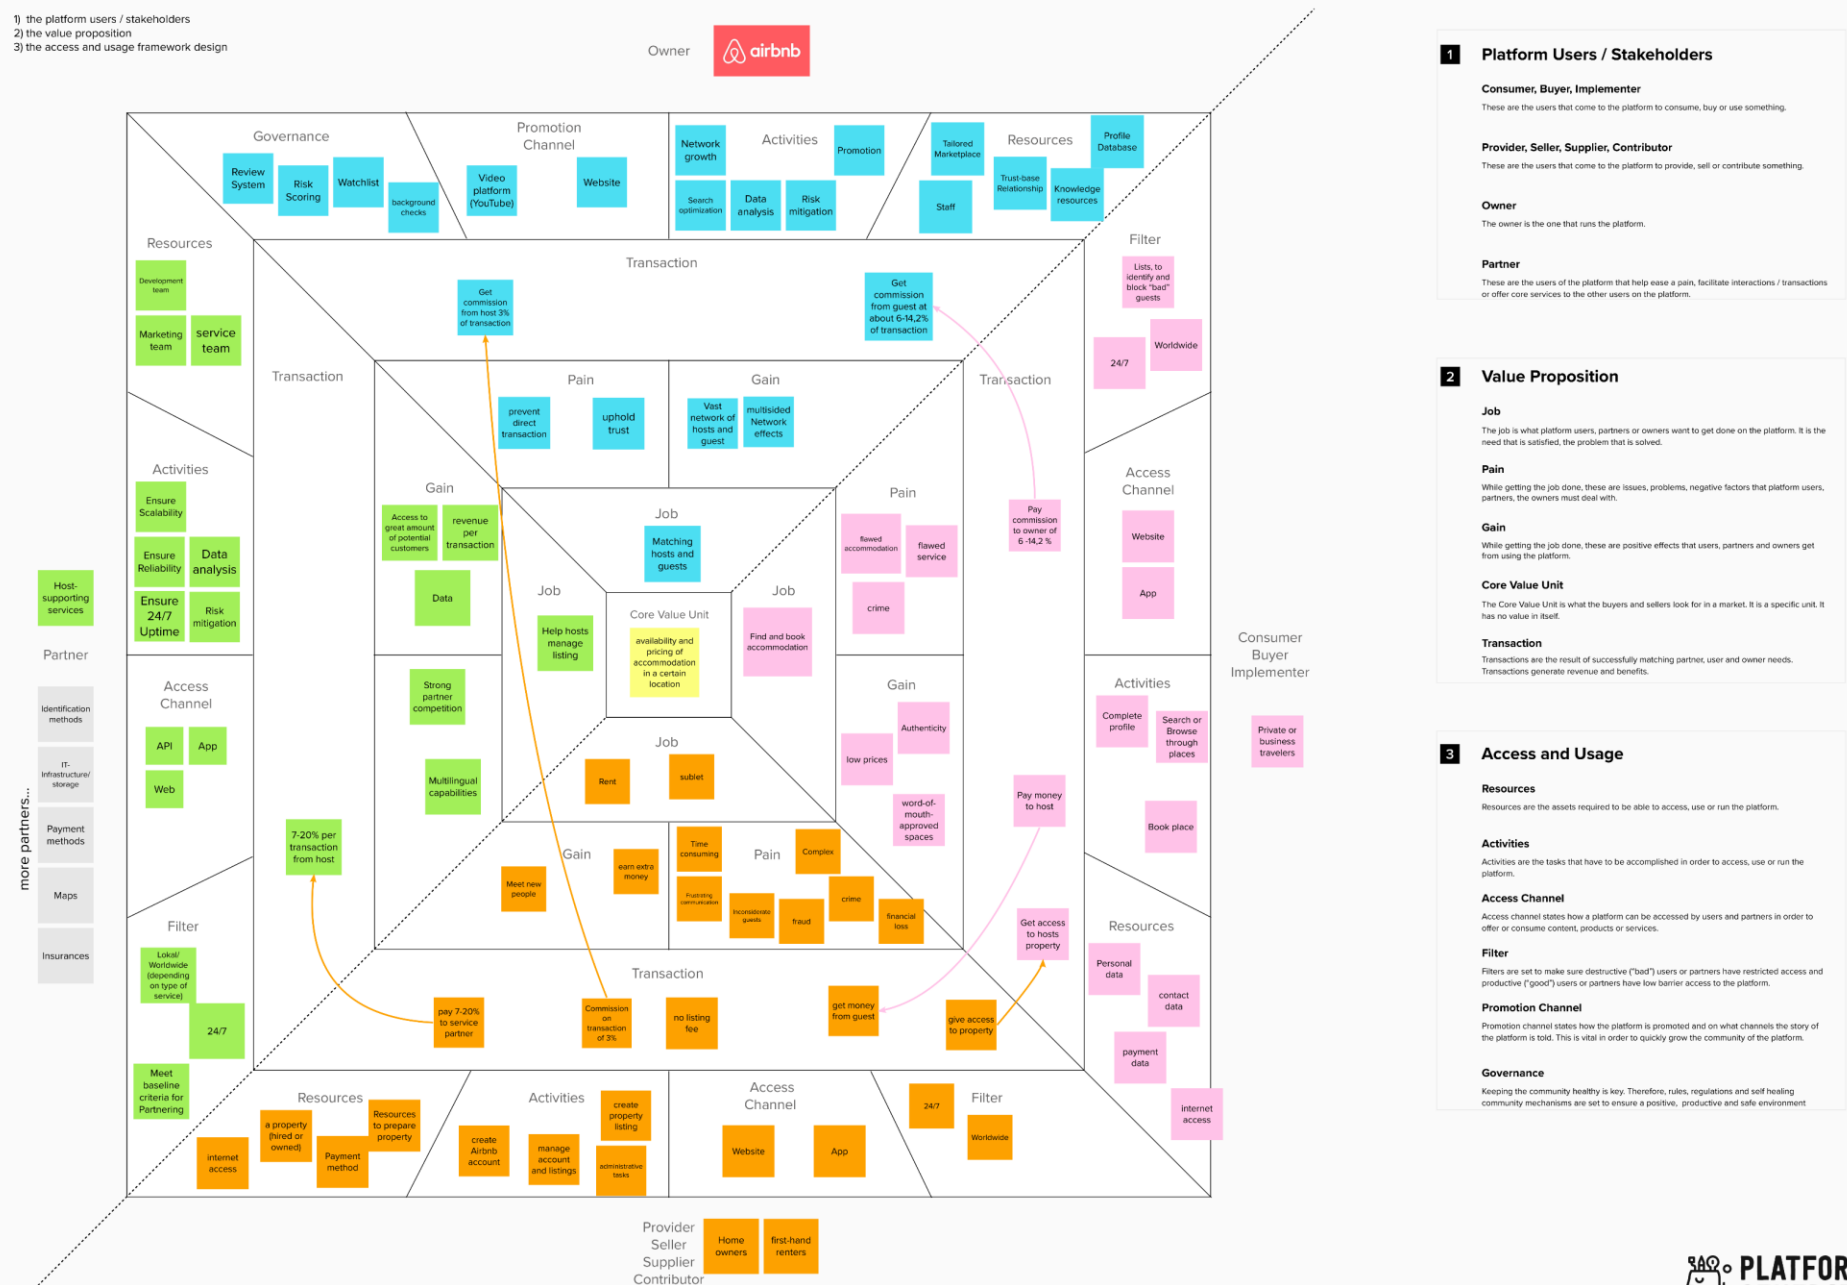

- 1) the platform users and stakeholders,
- 2) the value proposition and
- 3) the access and usage framework design.
